WEEKLY FEED GRAIN AND PROTEIN REPORT March 11, 2017

#### SECTION 1: US FEED GRAINS and VEGETABLE AND ANIMAL PROTEIN

Depending on who you talk to, US corn prices are down on the week between USD 6 to 9 m/t but soybeans were down even further at USD 9 to 12 m/t lower – soymeal prices were also down but not as much at just USD 5 or so per m/t lower. The same situation was seen in US wheat where winter wheats were down by USD 4 to 8 m/t and spring wheat down by about USD 4 m/t.

So one can say that it was certainly a down week – most everyone was blaming the drop in prices on the USDA WASDE report and its generally bearish numbers for all grains and oilseeds. Not that anything was hugely bearish -- just the confirmation that supply of grains and oilseed was very seen by the USDA to be at high levels was enough to shake up the market a little.

Of course, on the futures side, with only one day of trading after the USDA reports, we may just see more reaction next week.

The experts are now saying that the corn market is quite soft and that lower prices seem to be more of a chance than high prices – barring any sudden change in the situation in South America.

Soybeans too look quite weak, at least US beans, as new export business has not appeared for a while and the harvest in South America doesn't look to be having any major problems. But then, anything that slows the South American harvest will probably cause a short-term price rally.

On the wheat side of things, US prices are said to be lower due to rain and snow in areas of the US where the soil was getting too dry and could have affected the winter wheat. Unfortunately, the weather shows more dryness in the next couple of weeks for major winter wheat areas.

Most corn by-product export prices tended to be down on the week as corn prices dropped by USD 7 m/t or so. DDGS process dropped by USD 3 to 5 m/t while corn gluten feed was off by about USD 5 m/t and corn gluten meal by USd 5 to 10 lower. According to the USDA, domestic price report, corn gluten feed prices averaged about USd 2.50 m/t lower with corn gluten meal at as much as USD 15 m/t down and DDGS at USD 5 to 8 m/t lower.

A division of Hammersmith Marketing Ltd.

The lower domestic prices have not all been seen in the export market as yet but if corn and soymeal continue to slide lower this should bring export prices down too.

Per the US Grains Council report this week, buyers in Asia are scooping up supplies of DDGS at the current low price levels – DDGS can certainly compete very well against corn and soymeal. But, the USGC points out that the higher demand combined with lower ethanol production could start to push DDGS prices higher.

Animal protein prices into major markets in Asia have moved higher this week with some experts saying that purchasing has grown due to buyers in Indonesia wanting to cover their needs before the start of the month of Ramadan – starting about May 27. Both Australia and New Zealand are

A division of Hammersmith Marketing Ltd.

reporting higher export prices while prices from the US seem to be up by USD 10 to 20 m/t for all animal proteins.

The US domestic prices were steady on the week with no strong trends in any direction, at least not for now. However, export prices are said to be up as good export demand is tightening up on available export supplies.

# <u>USA Animal protein exports --- Jan 2017 - in m/t - major destinations</u> - one month of 2017

#### SECTION 2 --- FISHMEAL COMMENTS AND PRICES: PERUVIAN

Fishing is allowed in some areas of Southern Peru as of March 04 – initial catch levels are about 2 to 3,000 m/t per day with only 50 to 60 vessels fishing. The total landed so far this season is just under 69,000 m/t against the quota of 515,000 m/t.

The trade says that all is quiet in the Peru fishmeal business for now. Of course, with nothing left to sell before next season and producers hesitant to sell more future production there is no reason for buyers to be too active.

The talk in Peru is that the next fishing season will be in late April or early May depending on all the Peru research vessel results.

Fishmeal prices were a little softer this week for both Peru and Chile but nothing particularly significant. Looking at fish oil, this market has been quite soft but the new low prices have attracted the buyers so we could see fish oil prices move higher again in coming days. The major fish oil sales were for shipment to Europe.

#### **European fishmeal prices – FOB North German port.**

Туре	Protein %	Price per m/t USD
Herring fishmeal	72% protein	1,330
Danish fishmeal	64% protein	1,310
Peru fishmeal	64% protein	1,300
Chile fishmeal	67% protein	1,350
Iceland fishmeal	70% protein	1,350
